The U.S. Department of Energy (DOE) Office of Indian Energy Policy and Programs, the DOE Tribal Energy Program, the U.S. Environmental Protection Agency (EPA), and the Western Area Power Administration are conducting a webinar entitled Overview of the U.S. Environmental Protection Agency's Green Power Program on January 25, 2012, at 11:00 a.m. MST.

The EPA Green Power Program is a voluntary program that supports commercial and institutional energy users' procurement of green power by offering expert advice, technical support, tools, and resources. Organizations that partner with the EPA in this program can lower the transaction costs of buying green power, reduce their carbon footprint, and communicate their leadership to key stakeholders.

The partnership can provide support and recognition for tribes that are interested in utilizing green power for their own operations. The partnership's expanding roster of more than 1,300 current Green Power Partners may also represent unique opportunities to participate in tribal green power generation projects.

The speakers will discuss the qualifying green power sources and the steps to becoming a Green Power Partner, as well as the program's efforts to help Partners identify compelling project participation opportunities.

This webinar is the third in a series that will continue through September 2012. Webinar series topics include tribal renewable project opportunities, transmission policy, vision of tomorrow's transmission grid, what you need to know about National Energy Regulatory Commission (NERC) compliance, and overview of requesting transmission service. The webinar series description and presentations from past webinars are posted on the Renewable Energy Partnership website and will be updated as needed.
